Education

Sep 2023 – Mar 2027 **BINUS University Alam Sutera, Tangerang**
Undergraduate in Computer Science (GPA: 3.76)

Featured Projects

AiCNE | InceptionV3, Deep Learning, Gradio huggingface.co/ai-cne-detector

A university-course project to classify three classes of facial skin condition (acne severity) using deep-learning models. Built the web UI (Figma + Gradio) and trained models: best results achieved with InceptionV3 (training acc 0.9353, validation acc 0.9219).

Dog Emotion Classification | Python, Deep Learning GitHub

A machine-learning project aiming to classify dogs' emotional states by analyzing images of their faces. Built to enhance human-dog interaction and better interpret canine well-being.

Clickbait Detection | Python, NLP, XGBoost, Word2Vec, BERT GitHub

A comparative study of classical and transformer-based models for detecting clickbait in news headlines. Implemented and evaluated XGBoost + Word2Vec and BERT models to measure performance differences in textual classification accuracy.

Cateringz-Web | HTML, CSS, JavaScript GitHub

An individual HCI-course project focused on front-end UI/UX design for a catering website. Created an interactive prototype and responsive web layout without backend or database integration. Built to demonstrate practical web-interface design principles and user-friendly navigation.

Waste2Worth | Figma, Flutter GitHub

A mobile application that works like an eco-friendly e-commerce platform. It allows users to donate, sell, or give away used items so they can be reused instead of thrown away. Assisted in brainstorming sessions to define concepts, design UI in Figma, and implement it using Flutter for mobile app interfaces.

Skills

Programming Languages:	TypeScript, JavaScript, HTML, CSS, Python, C++, Basic Java.
Front-End Development:	React.js, Next.js, Stencil.js (Web Components), HTMX, Tailwind CSS, Design Tokens, Responsive Design, Accessibility (ARIA).
Tools & Workflow:	Git, GitLab (Merge Requests, CI/CD), pnpm, Turborepo (monorepo), Changesets, Biome, Storybook, Figma, Postman.
Practices:	Component-Driven Development, Atomic Design, Design Systems, Clean Code, Code Review, Conventional Commits, Semantic Versioning, REST API Integration.
Technical Skills:	Data Analysis, Machine Learning, Creative UI Design.
Soft Skills:	Public Speaking, Work Ethic, Teamwork.

Experience

Bank Sinarmas | Software Engineer (Front End) Intern Feb 2026 – Present

- Build and maintain **brankas-web-ds**, an enterprise, framework-agnostic design system in Stencil.js within a pnpm/Turborepo monorepo, using a layered base-component and public-wrapper architecture with React bindings for use across React, Next.js, and HTMX.
- Delivered 20+ reusable components (button, select, dropdown, search, tab, text-field, file-upload, pagination, dialog, datepicker, sidebar, and more), with a focus on accessibility (ARIA), immutable props, and BEM-based styling.
- Authored interactive Storybook documentation and component state coverage (default, disabled, loading, error, empty), and am building docs pages that match the Figma design specifications.
- Created Turborepo scaffolding generators and a story-coverage check that automate component, variant, and Storybook story creation, improving team developer experience and consistency.
- Maintained CI pipelines (lint, typecheck, build, Changesets, Storybook checks) and semantic versioning; reviewed teammates' merge requests and refined team conventions in AGENTS.md for AI-assisted development.
- Integrated the design system into the consumer application and collaborated with designers to iterate on components against Figma specs.
